

Khao Soon Tungsten

PROJECT OVERVIEW

- Khao Soon mine production to 1979:
 - Historic production grades est. at 2-4% WO₃
 - In 1974 USGS personnel reported that the high grade material being mined has an estimated wolframite content of 20%
- To date 41 diamond core holes for a total of 3,514m
 - Drilling highly successful, discovering near surface intersections containing good tungsten grades over considerable widths.
 - Drill supported Exploration Target (ET) 15-29Mt @ 0.2%-0.4% WO₃ defined in accordance with the JORC Code (2012)
 - ET generated with information from drill holes KSDD001-022
 - ET model supported by recent drilling (KSDD023-041, 1,602m)
- Hard rock tungsten (wolframite) mineralisation generally hosted in high grade breccia
- Extensive oxide hosted tungsten mineralisation:
 - Tungsten in thick profiles at/near surface
 - Likely vectors to underlying hard rock WO₃ mineralization
- Best intersections include:
 - KSDD001 - 51.5m @ 0.50% WO₃ from 0m, incl. 12.8m @ 1.07 WO₃ from 14.8m
 - KSDD021 - 14.55m @ 0.47% WO₃ from 0m, incl. 7.3m @ 0.62 WO₃ from 0m
 - KSDD024: 13.1m @ 0.51% WO₃ from surface, incl. 4.6m @ 0.97% WO₃ from 8.5m

KHAO SOON DRILL SUPPORTED EXPLORATION TARGET

PROSPECT	TONNES (M)	GRADE (WO ₃ %)
Than Pho West	21.5	0.30
Than Pho Ridge	17.1	0.34
Target 2	13.3	0.39
Rabbit	10.4	0.44
Total	15 - 29	0.2 - 0.4
